## **Program Report: Webinar on GHG MITIGATION – Past, Present and Future in the COVID World**

Department of EEE organized an online webinar on the topic “GHG Mitigation – Past, Present and Future in the Covid World” on 30.05.2020 from 4.00 to 5.00 PM by Mr. Tridip Kumar Goswami Global Head of Compliance, C – Quest Capital LLC, Washington – DC. He readily accepted to deliver an inspiring talk among our students and staffs about the effect of greenhouse gases.

### **He discussed the following topics:**

People add methane to the atmosphere through livestock farming, landfills, and fossil fuel production such as coal mining and natural gas processing. Nitrous oxide comes from agriculture and fossil fuel burning.

Fluorinated gases include chlorofluorocarbons (CFCs), hydrochlorofluorocarbons (HCFCs), and hydrofluorocarbons (HFCs). They are produced during the manufacturing of refrigeration and cooling products and through aerosols.

All of these human activities add greenhouse gases to the atmosphere. As the level of these gases rises, so does the temperature of Earth. The rise in Earth's average temperature contributed to by human activity is known as global warming.
