

Guest lecture report

On March 21, 2019, a workshop on 3D Printing & Reverse Engineering was conducted with Mr. K.A. Prabhakar, Regional Head of CADD Centre, Pondicherry, as the facilitator. The workshop aimed to familiarize participants with the latest advancements in 3D printing technology and reverse engineering processes, showcasing their applications across various industries. Mr. Prabhakar's expertise in Computer-Aided Design and Drafting (CADD) enriched the session with practical demonstrations and industry insights. Attendees gained an understanding of 3D printing principles, techniques, and materials, as well as the significance of reverse engineering in product design and development. Through hands-on sessions, participants operated 3D printers, analyzed 3D models, and explored reverse engineering workflows. The workshop provided valuable learning experiences, empowering attendees to embrace innovation and leverage emerging technologies for future endeavors. Attendees praised the comprehensive content and interactive sessions, highlighting the workshop's effectiveness in enhancing their skills and practical proficiency in 3D printing and reverse engineering. Overall, the workshop served as a platform for knowledge exchange, skill development, and professional networking, contributing to the participants' growth and success in the evolving landscape of advanced manufacturing and design engineering.
